Few words about Forex SunRise Indicator

Forex SunRise Indicator works on *major currency pairs*, from *M15 to H1 timeframes*.

This tool has **Buy Hall** & **Sell Hall** and **Indicator line**, I made a note on the screenshot #1 below.

Buy/Sell Halls lines based on *support & resistance calculation*. As for indicator line - it's based on *moving average*, but anyway, it has its own algorithm inside.

Screenshot #1

- *It's impossible to check Buy/Sell halls in the past, they are moving with price as well.*

There are several options to enter the market. First of all, you can *follow indicator line* and enter as soon as line change its color from **BLUE** to **RED** => means SELL, from **RED** to **BLUE** => means BUY.

You can also use another way: as soon as *price gets to one of these halls and brake it* - this is the signal to enter. For example price is between Buy Halls lines. As soon as it *cross higher line* - it's a signal to **BUY**. Same is with Sell Hall.

Check screenshot #2 for more information

Enter 1: as soon as indicator line change its color

Enter 2: as soon as price cross Buy/Sell Hall line

Installation and Setup

Forex Sunrise Indicator requires MetaTrader 4 to function. Install it, if you don't have it. For this, download it from a Forex broker web site and follow the installer instructions. Choose a well-known, reputable broker. After the installation, open a demo account.

1. Place the file **forex_sunrise.ex4** into **C:/Program Files/your broker/experts/indicators**
2. Restart MetaTrader4. Close it and launch again.
3. Insert Trigger line indicator: **Insert/Indicators/Custom/forex_sunrise**

4. Check all the settings.

Have a great trading with SunRise indicator!
